

ABC Scan 2006

Data Collection Made Easy

ABC Scan came from humble beginnings and minimal expectations. Thanks to the capable and hardworking Professional Services department at American Barcode and RFID, ABC Scan has evolved into a premium mobile data collection software package worthy of praise and a reaffirmation of its status. Effective immediately, ABC Scan will now be known as ABC Scan 2006. This new and highly upgraded product will now have a retail price of \$595. With all of the new and robust features that have been added over the last 12 months, ABC Scan 2006 is truly a bargain.

The screenshot shows the 'Main Menu' window of the ABC Scan 2006 software. The window title bar reads 'Main Menu'. The central area features the 'ABC Scan 2006' logo with the tagline 'Data Collection Made Easy' and 'Palm Version 5.3'. To the right of the logo, it says 'Edited Version 08/12/2005'. On the left, there is contact information for American Barcode and RFID, including the address '4630 East Elwood Suite 1, Phoenix AZ 85040', phone number '800-274-0324', fax number '480-968-3983', and email 'solutions@amerbar.com'. In the center is an image of a handheld scanner device. To the right of the scanner is a button labeled 'Retrieve Keyfob Scanner Data'. At the bottom, there is a row of nine icons with corresponding labels: 'View/Edit Database', 'Setup Handheld', 'Setup Titles', 'Quick Move', 'Quick Inventory', 'Select Reports', 'Import Export', 'Setup Users', and 'Quit Program'.

A list of the new features to ABC Scan 2006 include:

- **Handheld User Login** – Now you not only know what is in inventory but who the inventory person was. This feature is “Password Protected” so one user can’t log in as another.
- **Barcode Printing** – This new version prints location and item/asset barcodes out of the box with no customization. The supported label sizes are:
 - 2 inch x 1 ¼ inch
 - 2 inch x 1 inch
 - 2 inch x ½ inch
 - 1 ½ inch x ½ inch
- **New Handheld Lookup Features**
 - Allow or prevent the “Details” screen on a new item. Previous versions always prompted with this screen.
 - Prevent Re-Index on new item – Previous versions always re-built the lookup tables on an item / asset addition causing a few second delay between scans. Now the user can decide if the tables are re-built or not.
 - View Remaining Items – A button is added to the “Collect” screen in which the user can chose to view the items that have been scanned or the items that have not yet been scanned. This aids when doing fixed asset type inventories.

- **PC Inventory** – Added a routine to the PC which allows the user to do an inventory with a scanner tethered to the PC.
